

IntelliGuide™ Vision

Cameras embedded in the gripper (forward and downward facing) enable less engineering effort, faster deployment, and shorter time-to-production.

Factory calibrated and ready to use out of the box.
Simply specify offset to gripper fingers.

Additional vision tools available.

Significantly reduces the time needed from system design to installation and deployment.

Read 1D and 2D barcodes. See specifications for complete list.

Fast and easy deployment unlocks the best
Automatically adapt to changes in workspace
Eliminate time consuming teaching for simple and
complex applications
Higher reliability with no external cables
